

BIXWEAR

SOLUTIONS FOR APPAREL & FOOTWEAR

BixWear offers solutions through manufacturing custom components for the apparel and footwear industries. Our pilot-line capabilities and fast prototype turnaround ensure a seamless integration into any design and fabrication process.

SOLUTIONS FOR THE TEXTILES/APPAREL INDUSTRY

- Custom elastic tapes
- Custom elastic adhesives & films
- Perforated/breathable elastic films
- Specialty films and sheets

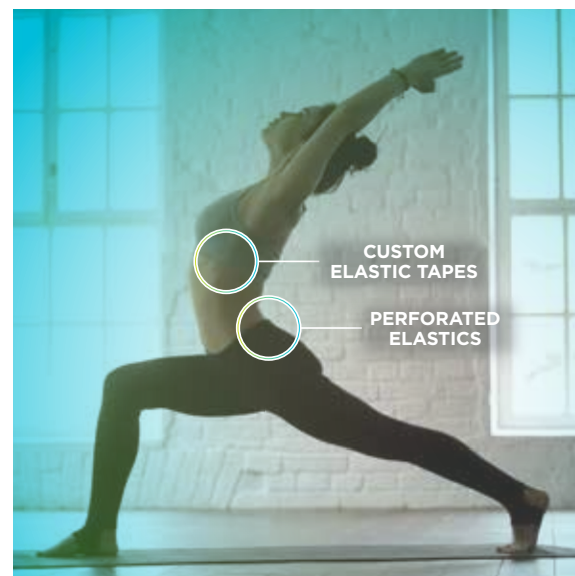

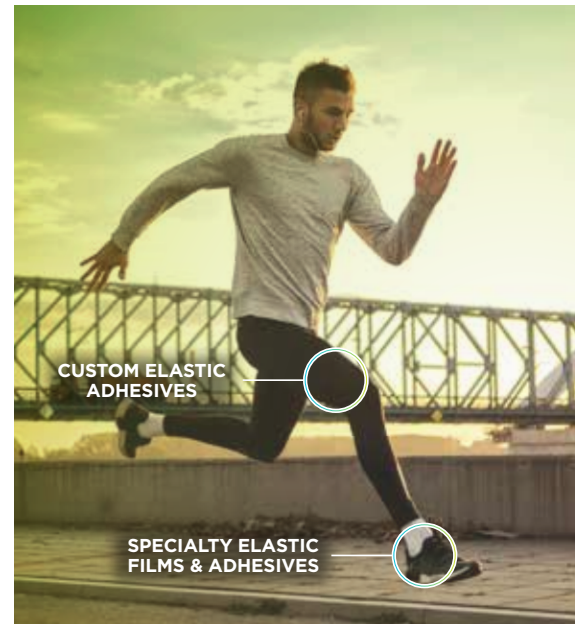

SPECIALTY FILMS AND POLYMERS

Our exceptional capabilities and proficiency in producing an array of specialty plastic resins allows us to provide a diverse portfolio of products to the apparel industry. Bixby's unique plastic formulations can be used to create a variety of adhesive, barrier and elastic products for use in both the footwear and apparel markets. This includes applications in performance clothing, undergarments, military attire, and personal protective garments.

Bixby creates both mono- and multi-layer films, including films integrated with foam padding, textile reinforcements, and multi-layer combinations of polymers and textiles. In addition to our standard products, we also routinely develop custom solutions for clients in the apparel industry.

ADVANTAGES OF BIXBY SOLUTIONS:

- High strength & elasticity
- Variety of specialty polymers
- Wide range of thicknesses and widths
- Multi-layer laminates
- Made in the USA
- Custom constructions available

Bixby International is a custom thermoplastic sheet extruder and laminator offering one of the broadest polymer material and substrate selections in the industry. Now in its second century of manufacturing in the USA, the company specializes in delivering practical solutions for the most challenging mono- and multi-layer plastic sheet applications in the world.

Bixby leverages its core competencies of material, process, and application expertise to meet its customers' most demanding design, engineering, and manufacturing challenges in markets ranging from apparel to energy, mining to medical and dental devices.

The professionals on our team have the experience and expertise to design, develop, scale and manufacture custom plastic extrusion products to meet even the most aggressive commercial deadlines. Our innovative iterative approach to responsive thermoplastic extrusion product development may be the solution you need to move your project to the next level. Contact us today to evaluate your custom application requirements.

PROCESSING EXPERTISE

Proprietary, flexible manufacturing processes for unique mono- and multi-layer custom plastic extrusion product constructions.

MATERIALS EXPERTISE

Over 100 years of in-house materials science experience gives our customers access to the broadest array of resins, tie-layers, fabrics and substrates in the thermoplastic extrusion industry.

APPLICATIONS EXPERTISE

Our skilled, knowledgeable technical staff expands your design, research and engineering capabilities to deliver commercially viable custom plastic extrusions.
